[Feedback](#) [Print](#)**7.1i MAP - "WARNING:PhysDesignRules:367 - The signal <DESIGN\_MODULE/TXN> is incomplete"****Description**

Keywords: TXP

When I implement a Virtex-4 MGT design, the following warning is issued by MAP against RocketIO TX serial pins:

"WARNING:PhysDesignRules:367 - The signal <DESIGN\_MODULE/TXN> is incomplete."

The signal does not drive any load pins in the design.

**Solution**

If all signals are completely routed at PAR, this warning can be safely ignored.

This issue is being investigated for a fix in a future release.
